EDUCATION

- Indian Institute of Technology Kharagpur, India**

- B.Sc. (Hons) + M.Sc. in Chemistry*

July 2016 – May 2021

SKILLS SUMMARY

- AI & Agentic:** Software Development Agents (Claude Code, OpenHands SDK), Agentic Workflow, RAG, LangGraph, Context Engineering
- Cloud & DevOps:** AWS, Azure, GCP, Kubernetes, Docker, Virtual Private Cloud (VPC) Development, CI/CD
- Architecture & APIs:** Microservices Architecture, OpenAPI, RESTful API Design, Hono, Socket.io, Yjs, Graph API
- Programming:** .NET (C#/VB), TypeScript, Python, Rust, C
- Frameworks & Tools:** React, Next.js, FastAPI, Node.js, Actix, Tauri, PostgreSQL, WebGL, OpenCV

EXPERIENCE

- Founding Engineer**

- SlidelyAI (YC Backed Startup), Bengaluru, India*

Feb 2025 – June 2026

- Engineered a high-fidelity graphics tracing pipeline leveraging Generative AI, computer vision, and autonomous feedback agents; integrated the system across distributed microservices
- Architected and deployed a cross-platform React-based application to port legacy Windows add-ins to macOS, ensuring feature parity and seamless user experience
- Created AI workflow combining TypeScript server, C# engine, and VB.NET – React client for AI based slide editing
- Unlocked web app integration within PowerPoint, enabling users to generate AI slides directly from the application
- Developed services in AWS and APIs for handling AI workflows and user data management

- Founder**

- Vasinya Yunaan (Startup), Pune, India*

Jun 2024 – Jan 2025

- Built a web platform (Node.js, React, FastAPI) to analyze over 10,000 patents, identifying market trends in diagnostics
- Implemented RAG models for market and technology gap analysis using OpenAI APIs to evaluate the go-to-market strategy
- Built a dashboard for analyzing customer feedback on over 1,000 pharmaceutical products by scraping customer testimonials
- Pitched to incubators and venture firms, and networked with investors to raise an initial \$20,000 in funding

PROJECTS

- Allr — Universal AI Agent Platform**

- Cross-platform agent client + multi-tenant agent OS, built on the open-source Hermes Agent*

June 2026 – Present

- Shipped Hermes Universal, a Tauri v2 client running Windows, macOS, Linux, Android and iOS from one codebase — first commit to App Store and Play Store betas in 5 weeks (1,100+ commits, 33 build days), closing the universal-client gap
- Published the production Hermes gateway: a single process bridging Telegram, Discord, Slack, WhatsApp and Signal into the agent runtime, deployed as a hardened systemd service
- Built Allr.OS, a multi-tenant agent operating system — per-user isolated agent and hosted-app stacks behind a shared edge (Caddy, Dex SSO, LiteLLM proxy, OpenTelemetry, Postgres/Redis) with one-script user provisioning
- Ran the build agentically: 4 parallel Hermes agent workers plus Claude Code executed a 470-ticket Plane backlog and shipped 8 demo products (Rust OOXML engine, ACP viewer, WebKit debugger), each maturing into a specialized Allr agent
- Built traction among Hermes agent followers: individual product posts repeatedly clear 1k+ impressions

- Architectural Intelligence Project**

- AI-driven architectural workflow and context management system*

Feb 2026 – April 2026

- Developed multi-agent collaboration system using WebSockets and Yjs for synchronized user and AI interaction on Revit files, backed by a custom Autodesk Revit connector bridging Revit and a web-hosted UI
- Developed the 'Open Viking' agent tool for long-context management using data chunking to eliminate context pollution
- Built a Qdrant-backed vectorized knowledge base and a hybrid JSONPath-Emmet query language to traverse hierarchical Revit structures and extract data for AI agents

- Google Summer of Code Contributor**

- Open Chemistry, University of Pittsburgh, USA*

June 2021 – August 2021

- Developed WebGL pipelines and a UI for dynamic atom identification and labeling in biomolecule visualization Link

AWARDS AND ACHIEVEMENTS

- Second Place, Siemens MakeItReal Hackathon — full-stack security system with real-time alerts** 2019
- First Place, Product Design Competition, INAE Youth Conclave — wound-control bandage design** 2019

Seeking hard technical problems.
